### WALES tank mixing order for any Pesticide:
1. Wettable powders & dispersible granules
2. Agitate tank to mix thoroughly
3. Liquid flowables & suspensions
4. Emulsifiable concentrate formulations
5. Surfactants & Solutions

### Tins (TPTH):
- Use in only 2 applications per cropping season and only in a tank-mix.
- Tins are vital to CLS management and overuse may further increase resistance.
- Watch Pre-Harvest intervals (PHI’s) as they range from 7 - 21 days.

### Topsin (Benzimidazole):
- Use only once per season early in spray program & only in a tank-mix (e.g. Tins - TPTH).

### DMI’s/Triazoles:
- Do not use in more than 50% of applications per cropping season and only in a tank-mix.
- Triazoles are vital to CLS management and overuse may further increase resistance.
- Alternate different Triazoles if used more than once in a spray season.
- Due to a high probability of cross-resistant CLS spores: Do not use both Provysol & Inspire XT in the same growing season if applying just 2 Triazoles per season.
- Watch Preharvest intervals (PHI’s) for Triazoles, they can range from 7 to 14 to 21 days.
- Consider applying Triazoles with longer PHI’s early in the spray season and shorter PHI’s later in your fungicide program for harvest planning.

### Minerva Duo:
- Combination of a Triazole + TPTH in a premix formulation and considered a tank-mix (premix).
- Can add EBDC into tank mix to keep fungicide program sequence on track.
- Do not tank mix Minerva Duo with glyphosate.

### EBDC’s (Mancozeb/Manzate):
- Are an effective tank mix partner for CLS control and resistance management.
- There is no known resistance to EBDC’s.
- Pre-Slurrying product helps in tank-mixing.
- Manebs are not as effective on CLS as Mancozeb’s.

### Headline/Priaxor (Strobilurin):
- Headline/Priaxor benefits include: plant health; harvest frost deterrence/recovery; and storage benefits.
- Use only with a tank mix of Tin (TPTH) at full rate. Exception is in the 3 Spray program under Option 2 where EBDC is used as the tank mix partner.
