The purpose of the Replant Chart is to assist in helping to make replant decisions relative to the current stand count and its planting date in comparison to a possible future replant date and stand count needed to possibility obtain a certain level of economic potential. The Replant Chart is not used to guarantee a specific \$/acre level from the planting date or stand count. It is only used to show a relative comparison of potential based on a regression of collected data from 2021-2025 on planting date and stand count observations.
