

Oslo Truck Haul

New For 2026 Harvest Low Truck Quota

In years past the entire site would shut down at 55 degree root temperatures, this year pile 2 will more than likely be piled above 20' and still fall under the 55 degree heat policy. Pile 1 if piling over vents will fall under the 65 degree heat policy. To minimize truck lines with only one piler open, we have implemented a low truck quota. Low truck quota is half of your allotted trucks to the site rounded down to the nearest full truck.

Truck Stickers: Truck shift stickers must be affixed to all trucks prior to stockpile harvest. There was confusion in the past regarding low quota. All stickers have an "N" and an "L" on them. **If the "L" was cut off a sticker that we give you, that is a truck that must be shut down in the event we go to low quota.** Please keep that in mind when choosing trucks that stickers are put on. Some growers will lose multiple trucks in the event we go to low quota. Stickers will be monitored and there will not be exceptions. In the event you need a breakdown truck, it must be approved by ag staff, and a breakdown window card will be given at the scale house.
